

CITY OF KYLE

Revised Building Department Inspection Update

October 28, 2025

Beginning January 1, 2025, the City of Kyle Building Department began inspecting driveways for all new one- and two-family dwelling units. Our Public Works Department will continue to inspect and issue the required Right of Way Excavation Permit for the replacement of existing driveways and sidewalks.

The City will utilize the same standards for driveway and sidewalk construction as other municipalities in the region. These standards include specifications for minimum widths, concrete reinforcement, expansion joints, approach radii, maximum slopes, and other key construction requirements and can be found on the City of Kyle website.

All permit applications for new residential construction submitted on or after January 1, 2025, will automatically include a driveway and sidewalk inspection in the permit workflow.

Contractors and builders must schedule the inspection once the driveway forms and ancillary components are complete. During this inspection, Building Department staff will verify compliance with the Texas Accessibility Standards (TAS) and the City's approved driveway and sidewalk specifications.

Sincerely,
